

*You'll find all the parts and instructions for making five masks in this kit. Masks will help to keep us all safe, so thank you for doing your bit.*

*We know some of you are expert at sewing and others are rusty or new. So we hope you'll find this a good design and also easy to do.*

*Two patterns and adjustable straps should help you to get a good fit. We hope the one made for teddies helps make kids wearing their own masks a hit.*

*Volunteers from Makespace have made this, but now it's over to you. Time to get down to some important work, but have fun while making them too!*

## What is Makespace?

Makespace is a community workshop in Cambridge with equipment ranging from sewing machines and crafting tools to 3D printers, laser cutters and CNC routers. The 4000 sqft space is available 24/7 to its members who use it for commercial and personal activities. It runs based on the amazing volunteer effort these members put in. See [makespace.org](https://makespace.org) for the whole story.

## Our Covid-19 Response Activities

The Makespace Mask Kit is just one of a number of Covid-19 response activities our members have been working on. Our first project was collaborating with NHS Addenbrooke's to design and build emergency PPE for hospitals and frontline workers in the area.

You can learn more about the different things happening on our Covid-19 Response Activities page

You can also volunteer your skills or donate money towards our costs to help these activities continue
